

What our users asked us for...

“it would be helpful on the tool to have simple guidelines on what the gaps between each vaccine needs to be.”

- PM/Admin, Tower Hamlets

“To see whether they’ve got an appointment booked for immunisations would be really handy.”

- Anon, evaluation

“My only recommendation would be to include the NHS numbers. This is useful from a recall point of view”

- Call/recall coordinator, City & Hackney

“Export Patient info tab into a document that can be imported into the patient clinical record before their appointment.”

- Local Immunisation Coordinator, Waltham Forest

“Can we show vaccines due up to 4 weeks in advance?”

- PM/Admin, Newham

Listening to users

- We've been **listening to user feedback** and collating ideas to improve the tool. Version 3 has:
 - New tool functions
 - Improvements to Excel output
 - Bug fixes & clinical safety review
 - Cosmetic changes to improve usability

What's new in Version 3.0?

New functions

Advance notice of vaccinations due for 1y and 3y4m olds & a chance for parents to reconsider

New filter for children about to 'fall off the QOF cliff'

See child's next booked appointment details

New guidelines on gaps between vaccine doses and age thresholds

Export vaccination history into a pdf file

Use at network level – pilot only

What's new in Version 3.0?

Improved Excel output

Added next appointment details

Now includes safeguarding flags already present in the Patient info tab

Includes Ethnicity to allow targeted outreach

Includes NHS number

Colour coded fields for the user to populate (as opposed to populated by the tool)
