Wed., " 25.	—Clinical Lecture, Mr. Bruce Clarke.
Thurs., " 26.	—Abernethian Society. Clinical Evening "Deformities."
Fri., " 27.	—Clinical Lecture, Dr. Ormerod.

To Freshmen.

ANOTHER Hospital year begins and with it another volume of the JOURNAL. But, since there is nothing new under the sun, we cannot do better than begin the new volume by offering a word of hearty welcome to all our Freshmen. We have not yet heard the number of the entry; but, whether that be great or small, it does not cause us such anxiety, provided the men be of the right stuff and worthy to carry on the great and noble traditions of St. Bartholomew's.

In the first place we must acknowledge that our Freshmen have shown good sense and sound judgment in their choice of Hospital; and we may assure them with all confidence that not one of them will ever regret having made himself a "Bart.'s" man. We do not say this from conceit of ourselves but rather from a true feeling of self-respect and also out of gratitude to the old Bartholomew's men who have preceded us and have made a great name for Bart.'s, and have handed down a worthy inheritance to the present generation.

THE Freshmen, this year, are fortunate in their time of entry for several reasons. The Committee of the Medical School has recently decided that St. Bartholomew's shall remain a complete School of Medicine in itself; and now that this is definitely settled the Preliminary Subjects will be taught with renewed energy and attention, while various improvements will be introduced into the laboratories. The result is that no disorganisation in the general course of the work can occur, nor indeed any interference with the general harmony of the School, which would be the necessary outcome of the transference of the teaching of the Preliminary Sciences to another centre.

SECONDLY, the new buildings of the Hospital are well in hand and by the time this year's Freshmen have passed
